PROJECTS

Unlearning Offline Stochastic Multi-Armed Bandits 2025.7 – 2026.1
Research. Advisor: Prof. Xutong Liu (UW, Tacoma), Prof. Xuchuang Wang (HKBU), Prof. Mengfan Xu (UMass), Prof. Shuai Li (SJTU), Prof. Mohammad Hajiesmaili (UMass).

- Lead the full experimental pipeline, including simulation design, implementation, and evaluation.
- Contribute to the theoretical development and proof of certified data removal in stochastic bandit settings.
- Demonstrate both theoretically and empirically that the proposed method satisfies formal unlearning criteria under offline bandit feedback.

Near-Optimal Regret for Efficient Stochastic Combinatorial Semi-Bandits 2025.2 – 2025.6
Research. Advisor: Prof. Xutong Liu, Prof. Shuai Li.

- Lead all experimental studies and supported the theoretical regret analysis of the proposed algorithm.
- Empirically validate that the method achieves a near-optimal trade-off between exploration and exploitation.
- Design simulations to evaluate regret bounds, sample efficiency, and computational scalability under semi-bandit and cascading bandit.
