🎓 EDUCATION

Shanghai Jiao Tong University

2023.9 - 2027.6

B.S. in Mathematics and Applied Mathematics & Artificial Intelligence

GPA: 3.84 / 4.3, Rank : 4 / 34

🧑‍🔬 RESEARCH AND PROJECT EXPERIENCE

Machine Unlearning for Offline Stochastic Multi-Armed Bandits

2025.7 - 2026.1

Co-First Author Advisors: X. Liu(UW), X. Wang(HKBU), S. Li(SJTU), M. Hajiesmaili(UMass)

Introduced the first unifying framework for machine unlearning in sequential decision-making under both fixed-dataset and distributional settings. Developed adaptive algorithms combining the **Gaussian mechanism** (inspired by differential privacy) and **LCB-based rollback**, with a mixing mechanism and data- and privacy-aware switching strategy. Contributed to theoretical upper and lower bounds and conducted large-scale experiments, achieving **20%–70%** improvement over baselines across diverse settings.

Near-Optimal Regret for Efficient Stochastic Combinatorial Semi-Bandits

2025.2 - 2025.6

Second Author Advisors: X. Liu(UW), S. Li(SJTU)

Contributed to the design and theoretical regret analysis of efficient combinatorial bandit algorithms. Led experiment design and implementation, including simulation environments, data generation, benchmarking, and visualization. Empirically validated the algorithm's near-optimal exploration–exploitation trade-off in both sample efficiency and computational complexity.

Deep Time-Series Framework for Cross-Sectional Stock Alpha

Personal, GitHub 2026.5 - 2026.6

Built an end-to-end deep-learning framework on daily S&P 500 data, covering feature engineering, temporal validation, automated hyperparameter tuning, backtesting, and robustness analysis. Implemented and compared **ResMLP, GRU, LSTM, TCN, and PatchTST-style Transformer** models for cross-sectional return ranking. After 5-bps transaction costs, PatchTST achieved a **25.42%** out-of-sample top- k long-only return, outperforming buy-and-hold benchmark by **8.17%**. Conducted ablation studies to analyze trade-offs.

💼 EXPERIENCE

Shanghai Yuewei Private Fund Management

Quantitative Research Intern

2026.7 – 2026.8

Developed **AURORA** (Autonomous Unified Research, Optimization & Reasoning Agent). Integrated multi-agent collaboration, automated evaluation, auditable workflows, hash-locked evidence, and authorization controls to support leakage-safe data splitting, controlled training, independent evaluation, and robustness testing. Enabled self-evolving yet governed model selection with fully reproducible and traceable research decisions.

Student Union, School of Mathematical Sciences, SJTU

President

2024.12 - 2025.11

♥ HONORS AND AWARDS

Mathematical Contest in Modeling, Finalist Prize (Top 1%)

2026

China Undergraduate Mathematical Contest in Modeling, National First Prize (Top 0.5%)

2025

Merit Student / Outstanding Student Leader

2024 / 2025

Scholarship of Tung's Foundation / Guo Chenchen Scholarship, SJTU

2024 / 2025

⚙️ SKILLS

- Programming: Python, C++, MATLAB, HTML, CSS, JavaScript, LaTeX. Experienced in deep learning model training (usually Top 1% of SJTU's Kaggle Competitions); familiar with Git, Anaconda and Linux.
- Language: Fluent in Chinese (native), English; experienced in academic communication in English.
